

B&T reloading device for SIR and SIR-X

B&T reloading device for SIR and SIR-X

Thanks to the reloading device for SIR and SIR-X less lethal ammunition, training with the GL06 is easy and cost effective. After picking up cases and projectile, the propulsion cartridge is ejected using the reloading press, before a new cartridge is inserted. Finally the projectile is manually pressed on the case again. The whole process takes just a few seconds and can be handled concurrent with the shooting training on the range. The projectiles can be reloaded multiple times. Therefore the training costs are reduced to the price of the propulsion cartridge witch as just about 50 Cent.

Additional Information

Follow the instructions of the manufacturer

Article-no.:	BT-23970
Delivery:	Case, manual
Length:	250 mm
Width:	80 mm
Height:	270 mm
Weight:	2.9 kg
Material:	Aluminum, steel
