

B&T cartridge SIR-X 40x46mm

B&T cartridge SIR-X 40x46mm

The SIR-X cartridge is a more powerful descendant of the well established B&T SIR. It fires the same projectile like the SIR at a higher velocity and thus more kinetic energy.

It enables order forces to apply physical power at large distances on "lightly armoured" individuals e. g. wearing heavy leather gear.

Due to optimised external ballistics, this B&T manufactured impact cartridge provides operators with high hit probability and a large effective range at manageable casualty risk.

Additional Information

Follow the instructions of the manufacturer

Article-no.:	BT-23715
Energy:	176 Joule
Calibre:	40 x 46 mm
Total length:	99 mm
Weight:	79 g
